

AI Powered Smart Contract Audit Report

Generated: 2026-08-01 11:35:01

Total Findings	Risk Score
5	4.0/10

Executive Summary

High-risk vulnerabilities were identified. Immediate remediation is strongly recommended.

Merged Security Findings

Name	Reentrancy
Severity	High
Confidence	Very High
Detected By	Slither, AI
Description	The withdraw function is vulnerable to reentrancy attacks, allowing an attacker to drain the contract.
why_this_matters	An attacker could exploit this issue by calling the withdraw function and then reentering the function before the first call returns.
Recommendation	Use a reentrancy lock to protect the withdraw function from reentrancy attacks.
Corrected Code	bool private locked; modifier noReentrancy { require(!locked, 'Reentrancy attack detected'); _; }

Name	Solc-Version
Severity	Informational
Confidence	High
Detected By	Slither
Description	Version constraint ^0.8.0 contains known severe issues (https://solidity.readthedocs.io/en/0.8.0/known-issues.html): - FullInlinerNonExpressionSplitArgumentEvaluationOrder - MissingSideEffectsOnSelectorAccess - AbiReencodingHeadOverflowWithStaticArrayCleanup - DirtyByteArrayToStorage - DataLocationChangeInInternalOverride - NestedCalldataArrayAbiReencodingSizeValidation - SignedImmutables - ABIDecodeTwoDimensionalArrayMemory - KeccakCaching. It is used by: ^0.8.0 (C:/Users/abhap/AppData/Local/Temp/tmpyk81l11d.sol#3)
why_this_matters	This issue was detected during static analysis. If left unresolved, it may expose the smart contract to potential security vulnerabilities.
Recommendation	Manual review recommended.
Corrected Code	

Name	Unchecked External Calls
Severity	Informational
Confidence	High
Detected By	Slither
Description	Low level call in Vulnerable.withdraw() (C:/Users/abhapp/AppData/Local/Temp/tmpyk81l11... ■- (success,None) = msg.sender.call{value: amount}() (C:/Users/abhapp/AppData/Local/T...
why_this_matters	This issue was detected during static analysis. If left unresolved, it may expose the smart
Recommendation	Manual review recommended.
Corrected Code	

Name	Unprotected Function
Severity	High
Confidence	Medium
Detected By	AI
Description	The deposit and withdraw functions are not protected against external calls, allowing any
why_this_matters	An attacker could exploit this issue by calling the deposit function with a large amount of f
Recommendation	Add a modifier to restrict access to the deposit and withdraw functions, such as only allow
Corrected Code	modifier onlyOwner { require(msg.sender == owner, 'Only the owner can call this function

Name	Missing Input Validation
Severity	Medium
Confidence	Medium
Detected By	AI
Description	The deposit function does not validate the input amount, allowing users to deposit a large
why_this_matters	An attacker could exploit this issue by depositing a large amount of ether and then calling
Recommendation	Add input validation to the deposit function to restrict the amount of ether that can be dep
Corrected Code	function deposit() public payable { require(msg.value <= 1 ether, 'Deposit amount exceed
